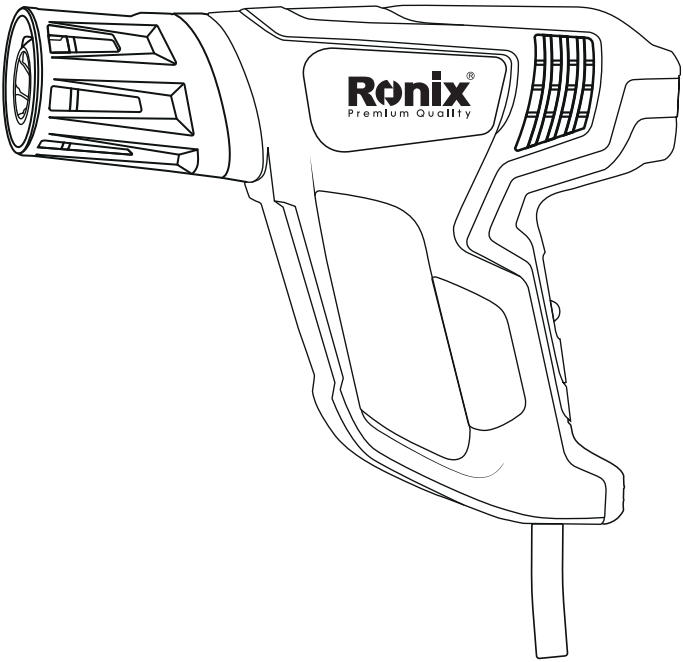
# HEAT GUN 2000W
# 1106

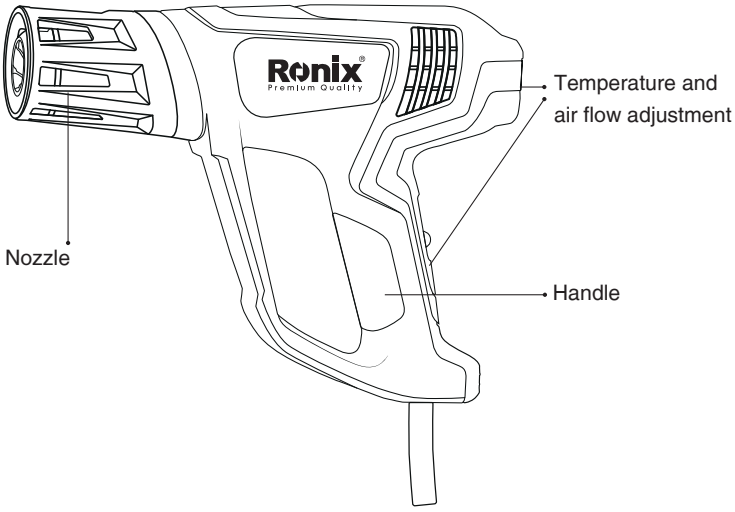


www-ronixtools-com

# TECHNICAL SPECIFICATION

| Model | **1106** |
|---|---|
| Power | 2000W |
| Voltage | 220-240V |
| Frequency | 50-60Hz |
| Working Current | 8A |
| Body Material | PP+GF30 |
| Operating Temperature | 60°-600°C |
| Noise Level | 50dB-60dB |
| Motor Type | SCRUB Brushless Motor |
| Air Volume & Temperature | 1:250L/min 60-600°C<br>2:500 L/min 100-600°C<br>3:500L/min 600°C |
| Weight | 0.74Kg |
| Heating element type | Insulated Heat Core |
| Includes | 1pc Protective Cover Against High Temperature and scald,1pc Cone Nozzle,1pc Fishtail surface Nozzle,1pc Concentrator Nozzle,1pc Glass Protection Nozzle |

## PART LIST



## SAVE THIS MANUAL

You will need this manual for safety instructions, operating procedures and warranty. Put it and the original sales receipt in a safe dry place for future reference.

## GENERAL POWER TOOL SAFETY WARNINGS

Read all safety warnings and all instructions. Failure to follow all warnings and instructions may result in electric shock, fire and/or serious injury. Save all warnings and instructions for future reference. The term “power tool” in the warnings refers to your mains operated (corded) power tool or battery operated (cordless) power tool.

### ▪WORK AREA

- Keep work area clean and well lit. Cluttered and dark areas invite accidents.
- Do not operate power tools in explosive atmospheres, such as in the

presence of flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.
- Keep children and bystanders away while operating a power tool. Distractions can cause you to lose control.

## ELECTRICAL SAFETY

- Power tool plugs must match the outlet. Never modify the plug in any way. Do not use any adapter plugs with earthed (grounded) power tools. Unmodified plugs and matching outlets will reduce risk of electric shock.
- Avoid body contract with earthed or grounded surfaces such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is earthed or grounded.
- Do not expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.
- Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges or moving parts. Damaged or entangled cords increase the risk of electric shock.
- When operating a power tool outdoors, use an extension cord suitable for outdoor use. Use of a cord suitable for outdoor use reduces the risk of electric shock.
- If operating a power tool on a damp location is unavoidable, use a residual current device (RCD) protected supply. Use of an RCD reduces the risk of electric shock.

## ▪PERSONAL SAFETY

- Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a power tool while you are tried or under the influence of drugs, alcohol or medication. A moment of inattention while operating power tools may result in serious personal injury.
- Use safety equipment. Always wear eye protection. Safety

equipment such as dust mask, non-skid safety shoes, hand hat, or hearing protection used whenever conditions require will reduce personal injuries.

- Avoid accidental starting. Ensure the switch is in the off position before plugging in.
- Carrying power tools with your finger on the switch or plugging in power tools that have the switch on invites accidents.
- Remove any adjusting key or wrench before turning the power tool on. A wrench or a key left attached to a rotating part of the power tool may result in personal injury.
- Do not overreach. Keep proper footing and balance at all times. This enables better control of the power tool in unexpected situations.
- Dress properly. Do not wear loose clothing or jeweler. Keep your hair, clothing and gloves away from moving parts. Loose clothes, jeweler or long hair can be caught in moving parts.
- If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used. Use of these devices can reduce dust related hazards.

## POWER TOOL USE AND CARE

- Do not force the power tool. Use the correct power tool for your application. The correct power tool will do the job better and safer at the rate of which it was designed.
- Do not use the power tool if the switch does not turn it on and off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
- Disconnect the plug from the power source before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidentally.
- Store idle power tool out of the reach children and do not allow persons unfamiliar with the power tool of these instructions to operate the power

tool. Power tools are dangerous in the hands of untrained users.
- Maintain power tools. Check for misalignment or sticking of moving parts, breakage of parts and other condition that may affect the power tool's operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.
- Keep cutting tools sharp and clean. Properly maintained cutting tools with cutting edges are less likely to stick and are easier to control.
- Use the power tool, accessories and tool bits etc., in accordance with these instructions and in the manner intended for the particular type of power tool, taking into account the working conditions and the work to be performed. Use of the power tool for operations different from intended could lead to a hazardous situation.

## OPERATING PROCEDURES

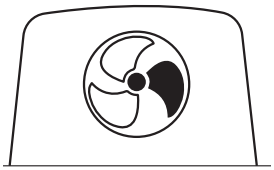
Your heat gun has been designed for the following operations:
- Removing paint and paint residues from wood, metal and synthetics;
- Removing self-adhesive labels;
- Applying PVC labels;
- Moulding low-temperature materials, including acrylics and Perspex.
- Melting together synthetics, including materials and foils with a PVC layer;
- Shrink tubing;
- Heating pipe attachments and bowing pipes;
- Repairing skis, surf boards and similar sporting equipment.

Instructions for use:
- Aim the mouthpiece of the machine at the workpiece.
- Heat the material a few seconds before working it.
- For optimum result it is recommended to test the machine first on a small part of the workpiece.

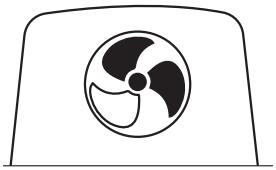
### ▪STARTUP

The position of the switch controls both the ventilation fan speed and the

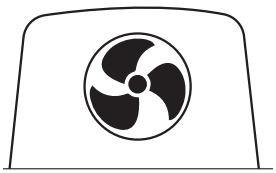
heat gun output power of the gun.



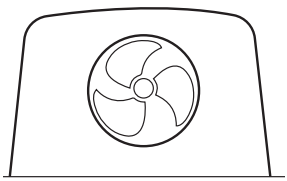
- To turn the tool on in low wind speed, slide the switch marked To adjust the temperature, use the master temperature control knob.



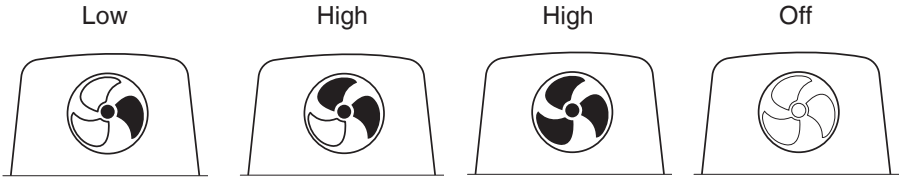
- To turn the tool on in high wind speed, slide the switch marked To adjust the temperature, use the master temperature control knob.

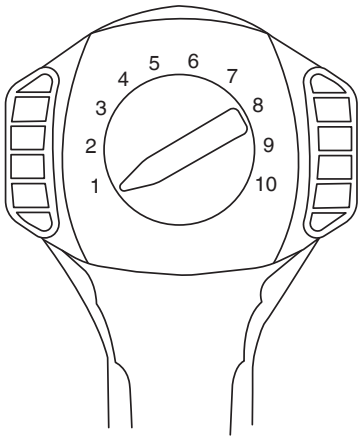


- To turn the tool on in high wind speed, slide the switch marked is not adjustable



- To turn the tool off, slide the switch to the position marked. ”





| Nozzle | Description | Purpose |
|---|---|---|
|  | Glass protection nozzle | Protection windows when stripping frames |
|  | Fish tail surface nozzle | Drying, thawing (heat spread over wider area) |
|  | Concentrating nozzle | For decolorization of the seams,edges, corners, cracks and plaster pilasters / Edge banding in all woodcarving industry and MDF (for PVC tapes and melamine) |
|  | Cone nozzle | Plastic welding and soldering |
