

Turbo Granite Cutting Disc 230 mm - Segment 13 - German

RH-3561

- Manufactured by forging process which ensures faster cut, longer life and a higher level of safety.
- For each application there is an optimal combination of diamond, alloy and manufacturing parameters.
- High-quality diamond tools with optimized cutting behaviors require the use of high-quality raw materials.
- Diamond tools must be matched to the application (range of use, material to be cut, drive power, speed, etc.)
- The optimum balance between diamond concentration, diamond quality
- Applications Granite cutting disc for concrete, hard building materials, for rough cutting granite, etc.
- For natural stones such as marble, wet cutting is usually done with table or bridge saws using blades larger than Ø230mm
- The alloy hardness against the abrasion of the material to be processed guarantees reliable performance
- Suitable for both dry and wet cutting with a strong bond between steel body and diamond segments.
- Our tools are manufactured in accordance with EN13236 to ensure safe use.
- The gaps between the diamond segments promote airflow and help dissipate heat generated during cutting
- Different sizes that will cover all your fabrication cutting needs

Model	RH-3561
Body Material	Laser weldable Steel
Style	K092
Maximum RPM	6650RPM
Max Speed	80m/s
Application	Granite
Tools	Angel Grinder
Number of Teeth	16

Turbo Granite Cutting Disc 230 mm -
Segment 13 - German

RH-3561

Arbor Size	22.23mm
Disc Thickness	1.8mm
Wheel Diameter	230mm
Segment Thickness	2.6mm
Segment Height	13mm
Weight	0.61Kg
