

## Inverter Welding Machine

**20-200A**

# RH-4676

- IGBT technology for better welding quality , greater welding penetration, reduced energy consumption and increased efficiency
- Unbeatable automatic short circuit current protection, easy ignition, less spark, provides excellent arc strike performance at rust surface
- Run 5.0mm MMA electrode
- Multi protection of over voltage, over heat, over current and over load protection
- Hot start, anti-stick, less spark, reliable. Ideal welding equipment for entry-level welder.
- Equip with volume ( Current ) for easy and better welding setting
- Digital display provides highly accurate welding
- Professional cooling system in order to increase efficiency and continuance welding

|                          |                         |
|--------------------------|-------------------------|
| Model                    | RH-4676                 |
| Input Voltage            | 220-240V                |
| No-Load Voltage          | 65±5V                   |
| Output Current Range     | 20-200A                 |
| Rated Output Voltage     | MMA-28V TIG 18V         |
| Max Input Power Capacity | MMA-10KVA TIG-5.8KVA    |
| Max Input Current        | MMA-44.5A TIG-26A       |
| Power Factor             | 0.65                    |
| Duty Cycle               | 25°C 100%               |
| Insulation Class         | F                       |
| Protection Class         | IP21s                   |
| Length Mig Torch         | 4m Tournch              |
| Type of Used Gas         | Argon Gas or Mixed Gas  |
| Electrode Diameter       | 1.6 2.0 Tungsten Needle |
